Summary

Azure Cloud & Database Engineer with 7.6+ years of experience in DevOps, Azure Cloud, and SQL Server. Skilled in designing Azure Landing Zones, automating cloud infrastructure with Terraform, and building CI/CD pipelines using Azure DevOps, Git, GitHub, and GitHub Actions. Experienced in Azure cloud adoption, infrastructure modernization, and governance initiatives. Successfully delivered cloud and database migration projects involving Azure SQL services. Strong expertise in SQL Server Administration, high availability, performance optimization, and database management across on-premises and Azure environments. Also have hands-on exposure to Docker, Kubernetes (AKS), and container-based deployments.

Skills

Cloud & DevOps: — Microsoft Azure | Azure Landing Zone | Azure DevOps | CI/CD Pipelines | GitHub Actions | GitLab CI | Terraform (IaC) | Docker | Kubernetes (AKS) | Infrastructure Automation | Azure Resource Manager | Cloud Governance

Azure Database & Migration: — Azure SQL Database | Azure SQL Managed Instance | Azure PostgreSQL Flexible Server | Database Migration Service (DMS), DMA | On-Prem to Azure Migration | SQL Server to Azure SQL/PostgreSQL Migration

Database Administration: — MS SQL Server 2014-2025 | Always On Availability Groups | Failover Clustering | Replication | Log Shipping | Database Mirroring | Performance Tuning | Backup & Recovery | High Availability | Disaster Recovery | Security Management | T-SQL, SSMS, Azure Data Studio

Professional Experience

Embee Software Pvt Ltd.

01/2023 – Present | Delhi

Azure DevOps & Database Engineer

- Automated Azure infrastructure provisioning using **Terraform** for Resource Groups, VNets, Storage Accounts, Virtual Machines, and Azure SQL services, enabling consistent and scalable deployments.
- Designed and implemented **Azure Landing Zone** architecture aligned with security, governance, networking, and operational best practices.
- Built and maintained **Azure DevOps CI/CD pipelines** for infrastructure and database deployments, improving release efficiency and reducing manual effort.
- Managed **Git, GitHub, and GitHub Actions** for source control, workflow automation, and Infrastructure-as-Code (IaC) deployment processes.
- Led **on-premises to Azure migration projects** involving Azure SQL Database, Azure SQL Managed Instance, and Azure PostgreSQL Flexible Server using cloud migration best practices.
- Administered Azure IaaS and PaaS services, ensuring compliance with governance, security, and operational excellence standards.
- Managed and optimized **SQL Server, Azure SQL Database, and Azure SQL Managed Instance** environments, including HA/DR, backup and recovery, and performance tuning.
- Implemented **Always On Availability Groups**, Failover Clustering, and Disaster Recovery solutions for business-critical applications.
- Participated in cloud modernization and infrastructure transformation initiatives to improve scalability, reliability, and operational efficiency.

Three M software

10/2021 – 08/2022 | Pune

Application Engineer

- Led a cloud modernization initiative for a major Reverse Osmosis (RO) plant design application, transforming fragmented on-premises environments into a scalable Azure-based platform.
- Contributed to the design and implementation of **Azure Landing Zone** architecture, establishing a secure, governed, and standardized foundation for engineering applications and database workloads.
- Developed **Terraform-based Infrastructure as Code (IaC)** solutions to automate provisioning of Azure resources, significantly reducing manual deployment effort and improving environment consistency.
- Supported adoption of **Azure DevOps CI/CD pipelines**, Git, and version control practices to standardize infrastructure deployments, configuration management, and release processes.
- Participated in **Azure migration assessments and planning**, identifying application, database, networking, and security dependencies, including SQL Server migration initiatives to Azure platforms.
- Administered and optimized **SQL Server environments**, implementing HA/DR solutions (Always On AG, Log Shipping, Mirroring, Replication), performing performance tuning, database upgrades, failover testing, and disaster recovery exercises.

HNGIL

01/2019 – 09/2021 | Nashik

Engineer E2

- Installed, configured, and administered **Microsoft SQL Server 2014–2019** across enterprise production and development environments.
- Managed database security, maintenance plans, SQL Agent jobs, backup/recovery processes, and performance optimization activities.
- Contributed to **Azure cloud adoption initiatives**, including Azure Landing Zone planning, governance alignment, and infrastructure readiness assessments.
- Supported infrastructure modernization efforts involving **Azure IaaS services, virtual machines, networking, and cloud migration planning**.
- Ensured database availability through proactive monitoring, storage management, transaction log administration, and operational support.
- Delivered **24x7 production support** and maintained technical documentation for database and application environments.

Education

M Tech in CAD CAM and Robotics

08/2016 – 09/2018 | Mumbai

University of Mumbai

BE in Mechanical Engineering

07/2012 – 06/2015 | Nashik

Savitribai Phule Pune University

Diploma in Mechanical Engineering

08/2009 – 06/2012 | Nashik

University of Mumbai

Certificates

Microsoft Certified: Azure Cosmos DB Developer Specialty credential (DP 420)

Microsoft Certified: Azure Database Administrator Associate (DP 300)

Microsoft Certified: Azure Data Fundamentals (DP 900)

Microsoft Certified: Azure Fundamentals (AZ 900)
